

Perennial grasses

SF NOUGA

Tall fescue

SF NOUGA has thrown away the rule book when it comes to tall fescue. It's an Oceanic type with outstanding softness of leaves, making it highly palatable and providing ease of management. This combined with all the usual positive benefits of tall fescue make SF NOUGA a pasture option that's hard to beat.

Utilise in high production environments where perennial ryegrass is struggling to persist due to environmental conditions, particularly heat and/or insect pests.

Agronomic features:

- > Super soft leaves
- > Highly digestible
- > Strong regrowth and autumn vigour
- > Suitable for all stock types
- > High dry matter production
- > Oceanic type - easier to manage
- > Compatible with companion species, especially legumes

NEW RELEASE

Discuss your requirements with Seed Force.

Feed available

Being an Oceanic type tall fescue, SF NOUGA's spring growth resembles a slightly flatter growth curve compared to the typical big spring peak of a continental type, making it much more manageable.

Stock suitability

All stock types.

Sowing rate

20-30kg/ha

depending on companion species
